ABSTRACT

This study aims to examine the effect of work discipline and work ethic on the performance of Sultan Agung Private Middle School teachers. The number of samples in this study were 31 teachers obtained by the census method. The instrument used in this study was a questionnaire that was distributed directly to the teacher as a respondent. Testing research instruments using validity and reliability tests. Data analysis used multiple linear regression, correlation, coefficient of determination, simultaneous and partial test. The results of the research and hypothesis testing show that work discipline variables and the ethic of apes have a positive and significant effect on teacher performance. The empirical findings indicate that in order to improve work discipline at Sultan Agung Pematangsiantar Private Middle School there needs to be a transparent system in recruiting permanent teachers who only teach at Sultan Agung Pematangsiantar Private Middle School so that the teacher focuses on his/her work. Then to improve the work ethic of Sultan Agung Pematangsiantar Private Middle School teachers, the principal as the leader should be able to provide personal and organizational motivation so that every teacher who works can maintain a balance of work ethic competently. Furthermore, to improve performance, every teacher should have the characteristics of self-enhancing potential so that the consistency of teacher professionalism can develop.

INTRODUCTION

Along with the development of science and technology that occur in Indonesia, all fields of business in Indonesia are also experiencing progress and development. This has caused competition in all fields of business, both transportation, food and beverages, tourism and is no exception in the field of education. The condition of competition in the world of education has begun to be felt by every school by looking at the condition of the community who want their
children to go to a school that has credibility, quality teaching methods and provides adequate learning facilities. Due to the rapid competition between schools, each school must have superior value to be able to compete with other schools. To face these challenges, leaders need to encourage teachers to empower human resources through developing potential (Malik and Untung, 2013).

Sultan Agung Pematangsiantar Private Middle School is one of the favorite schools in Pematangsiantar City. To be able to compete with Sultan Agung Pematangsiantar Private Middle School, the teacher must improve the performance of the teacher, because teachers have a very strategic role in advancing the success and quality of education. Good performance will get good results, but conversely less good performance will get poor performance results (Komardi and Ayu, 2018). Optimizing teacher performance is one of the concrete steps in building an educational mentality that has been considered less than optimal. Several strategic steps have been taken by the central and regional governments in developing and boosting the performance of teachers in each school in the city, district, sub-district and rural areas.

Performance appraisal related to the implementation of the learning process for teachers includes activities like planning and assessing, analyzing the results of the assessment and carry out follow-up results of the assessment in applying the 4 competency domains that must be possessed by teachers in accordance with Minister of National Education Regulation Number 16 Year 2007 Regarding Academic Qualification Standards and Teacher Competency. Learning management requires teachers to master 14 competencies that are grouped into pedagogical, personality, social and professional competencies. The phenomenon of the performance of Sultan Agung Pematangsiantar Private Middle School can be seen from the following table:

Based on table 1 above, it can be seen that the performance of Sultan Agung Pematangsiantar Middle School teacher T.A. 2018/2019 is not optimal yet. This can be seen from the dimensions with an average percentage of 23.75% and a fairly good response category obtaining an average percentage of 7.5% for the category of bad answers. The phenomenon of the problem of the performance of Sultan Agung Pematangsiantar Private Middle School teachers is seen from personality competence where some teachers often leave the classroom for things that are not important and spend more time on activities that do not support school development. Furthermore, for teacher performance that is not yet optimal, it can be seen from social competence that many Sultan Agung Pematangsiantar Private Middle School teachers uphold a sense of seniority so they feel the most righteous and do not want to accept advice from junior teachers. Based on research (Baumann, 2017), the main focus of school policy lies in increasing school discipline in terms of costs that are neutral, but the impact is very effective on the results to be achieved such as teacher performance and competitiveness.

One factor that is indicated to affect the performance of Sultan Agung Pematangsiantar

Source: recapitulation of the performance assessment by Sultan Agung Pematangsiantar Middle School teachers (June, 2019)
Private Middle School teachers is work discipline. Discipline is the most important element for the success of students’ academic performance, both inside and outside the school (Njoroge and Ann, 2014). Teacher discipline can be seen from the dimensions of the frequency of attendance, the level of alertness, adherence to work standards, adherence to work regulations and work ethics. The phenomenon of teacher work discipline problems can be seen from the dimension of the frequency of attendance where some teachers are often absent without notice to the school and there are still junior high school teachers who arrive late to school. The phenomenon of teacher work discipline problems can also be seen from the dimension of adherence to work standards where there is still a lack of teacher's awareness to do their work as a teacher so that assignments are often not completed on time. According to Tohardi (2009: 96) states that individual or employee discipline can affect work productivity.

Another factor influencing the performance of Sultan Agung Pematangsiantar Middle School teachers is work ethic. According to Sinamo (2016: 23) states that if the work ethic is exhibited in earnest while working, it also strengthens our confidence in the truth of what is taught as well as in our capacity as evidenced by the increased performance and results we obtain. The work ethic of Sultan Agung Pematangsiantar Middle School teachers can be seen from the dimensions of teacher training, grace, teacher training, teaching is calling, teacher training is actualization, teacher training is worship, teacher training is art, teacher training is honor and teacher training is service. The work ethic in the teaching profession is not just an added value for a student’s education but part of a teacher’s obligations based on the educational process (Turk and Bojana, 2016).

The phenomenon of the work ethic problem of Sultan Agung Pematangsiantar Private Middle School teachers can be seen from the teacher dimension is grace where there are still Sultan Agung Pematangsiantar Private Middle School teachers who are less responsible in carrying out their duties as a teacher, many tasks are not completed in a timely manner. The phenomenon of the work ethic problem of Sultan Agung Pematangsiantar Private Middle School teachers can also be seen from the teacher dimension is a call where there are still Sultan Agung Pematangsiantar Private Middle School teachers who have not worked with full integrity for the progress of the school. Sultan Agung Pematangsiantar Private Middle School teacher only carries out his/her job if given the appropriate reward according to him/her.

The main objectives of this research study are to analyze: (1) the effect of the quality of work discipline on teacher performance; (2) the effect of the teacher’s work ethic on teacher performance; (3) the effect of work discipline and work ethic on teacher performance simultaneously. This research is expected to be able to contribute to Sultan Agung Pematangsiantar Private Middle School in optimizing the performance of his/her teacher as an effort to improve the quality of education in Pematangsiantar and National Cities.

LITERATURE REVIEW

Work Discipline

Discipline is a management action to encourage employees to comply with various requirements in other words, employee discipline is a form of training that seeks to improve and shape knowledge of the attitudes and behaviors of employees so that the employee voluntarily cooperates with other employees to improve work performance. The intensive implementation of discipline directly impacts on performance improvement (Sofyan, et. Al., 2016). According to Rivai (2011: 825), "work discipline is a tool used by managers to communicate with employees so that they are willing to change a behavior and as an effort to increase one's awareness and willingness to meet all company regulations". Furthermore according to Handoko (2003: 208), "work discipline is a management activity to carry out organizational standards". Meanwhile, according to Singodimedjo (2002: 86), "work discipline is an attitude of willingness and
willingness to obey and obey the norms of regulations that apply in the surroundings". In accordance with the opinion of Sastrohadiwiryo (2005), there are several causes that are suspected to affect work discipline, namely: the frequency of attendance, the level of alertness, adherence to work standards, adherence to work regulations, and work ethics.

**Work Ethic**

One must have a view and attitude to respect work as something noble for human existence. Views and attitudes towards work are known as work ethics. According to Anoraga (2009: 282), "the work ethic is a view and attitude of a nation or people towards work." According to Sinamo (2005: 282), "the work ethic is a set of positive behaviors rooted in fundamental beliefs accompanied by a total commitment to the work paradigm the integral. "According to Asifudin (2004: 26)," work ethic is a special trait about an individual or group of people who have attitudes and character, habits and beliefs. "In the perspective of education, there are several indicators related to the work ethic of teacher training namely , teacher training is a blessing, teacher training is a mandate, teacher training is a calling, teacher training is actualization, teacher training is worship, teacher training is an art, teacher training is honor; teacher training is service (Sinamo, 2016).

**Teacher Performance**

Performance is not an individual characteristic such as talent or ability but is an embodiment of the talent or ability itself. The ability and expertise possessed by each human resource is the key to the success of a company or organization in developing its vision and mission. Performance is the flow in maximizing goal orientation which is directed to ensure that the processes in the organization are in place to maximize the productivity of employees, teams and ultimately the organization (Mondy, 2008). According to Mathis and John (2006: 113), "performance is the result of work achieved by someone in carrying out the tasks assigned to them based on experience, sincerity and skill and time". According to Rivi (2004: 309), "performance is a real behavior that is displayed every person as a work achievement produced by employees in accordance with their role in the company". Based on the regulation of the Minister of National Education Number 16 Year 2007 Concerning Academic Qualification Standards and Teacher Competencies, the teacher performance appraisal mechanism includes: pedagogical competence, personality competence, social competence and professional competence.

**Effect of Work Discipline on Teacher Performance**

Discipline is part of the most important operational functions of human resource management. The low discipline of teacher work can result in poor quality of education in schools (Nugraheni and Ratna, 2106). The better the discipline of the teacher, the higher the work performance he can achieve. Without good teacher discipline, it is difficult for organizations or agencies to achieve optimal results. Good discipline reflects the amount of responsibility someone has for the tasks assigned to him. This encourages enthusiasm for work, enthusiasm for work and improves employee performance and the realization of company or organizational goals.

Based on the results of Jeffrey and Ruliyanto's study (2017); Wahyudi, Partono, and Rediana (2016); Nugraheni and Ratna (2016); Hartono and Zubaidah (2017), Yusuf and Gita (2018), Sya'roni, Toni and Dwi (2018), Supeno, Iman and Ira (2017), explained that work discipline has a positive contribution to teacher performance. In line with the above research, several studies also revealed the same thing about the impact of work discipline on teacher performance such as research conducted by Yudistiro (2015); Soelton (2018); Purwoko (2018); Rosidin and Teguh (2018), Jeffrey and Ruliyanto (2017), revealed that work discipline has a positive impact on teacher performance.

**The Effect of Work Ethic on Teacher Performance**

Teaching ethics is a typical intensity that becomes
the vitality of work, the joy of the heart which becomes the spirit of work and the inner passion that becomes the work stamina of a teacher in carrying out his duties. In addition, charisma which is a personal light of our authority will also be stronger with the development of work ethic. Personality and work behavior that are rooted in noble morality in the ethos of teacher training will emanate through our everyday nature. Work ethics refers to moral behavior in seeing work as a desired activity rather than a burden. Individuals who work with a strong work ethic are very committed to their work and are more satisfied at work (Abbasi and Ghulam, 2012).

In accordance with the results of the Segantara study, I Made and I Gusti (2017); Herminingsih and Widienti (2017); Muslim (2018); Bawelle and Jantje (2016); Karauwan, Victor and Christoffel (2015), Putra, I Made and Nyoman (2017), obtained results about the work ethic having a positive contribution to performance. Based on research by Timbuleng and Jacky (2015); Yantika, Toni and Yusron (2018); Sayuti (2018), Sagay, Bernhard and Greis (2018), Priansa and Agus (2015), Nafiah, Zainul and Noer (2018, Desky (2014), Dwiningwarni and Prince (2017), revealed that the work ethic has a positive impact on performance improvement.

Based on the background described above, the authors describe the conceptual framework as follows:

Based on the conceptual framework described above, the authors formulate the research hypothesis as follows:

H1: Work discipline contributes positively to teacher performance
H2: Work ethic contributes positively to teacher performance
H3: Work discipline and work ethic contribute positively to teacher performance simultaneously

RESEARCH METHODS
This research uses observation and interview methods with quantitative approach models. The location of the study was conducted at Sultan Agung Private Middle School which is located at 19th Surabaya st, Dwikora Village, Siantar Barat District, Pematangsiantar City. Data collection was carried out using a questionnaire instrument that was distributed to respondents manually. The target population is the entire Sultan Agung Pematangsiantar Private Middle School T.A. 2018/2019 of 31 peoples. The sampling technique is done by census method, where the total population is sampled as many as 31 teachers. The analytical tool used in the study used IBM SPSS version 21 statistical software.

Indicator questions contained in the questionnaire consisted of several question items based on research variables namely work discipline, work ethic and teacher performance. The operational definition of variables for work discipline variables includes the frequency of attendance consisting of six indicators, the level of alertness consists of three indicators, adherence to work standards consists of three indicators of compliance with work regulations consisting of three indicators, work ethics consists of four indicators. Next to the work ethic variable includes teacher training is a mercy consisting of six indicators, teacher training is a mandate consisting of three indicators, teacher training is a call consisting of four indicators, teacher training is worship consisting of three indicators, teacher training is an art consisting of the three indicators, teacher training is an honor consisting of three indicators, teacher training is service consisting of three indicators. Then for teacher performance variables include pedagogical

Figure 1. Conceptual Model (Source: Researcher, 2019)
competence consisting of 7 indicators, personality competence consists of 3 indicators, social competence consists of 2 indicators, professional competence consists of two indicators. The weight measurement for each item of variable questions uses a Likert scale, which is 1 = Very Not Good, 2 = Not Good, 3 = Medium /, 4 = Good, 5 = Very Good.

RESULTS AND DISCUSSION

Description of Respondents

The description of the respondent’s description is part of the explanation of the respondent’s profile which is used as the population and research sample. In order not to be biased and representative, the authors divide some of the respondents based on demographics. To find out the general situation of teachers who were used as respondents in this study, the authors made a recapitulation of respondent data presented in the following data tabulations:

<table>

Asymp. Sig. (2-tailed) | .742 | .820 | .999 | .990 |

a. Test Distribution is Normal.
b. Calculated from data.
Source: results of data processing (2019)
Normality Test
Based on Table 5, Kolmogorov one sample normality test above can be seen asmp. Sig (2-tailed) at a total of X1 (work discipline) of 0.742, total X2 (work ethic) of 0.820 and total Y (performance) of 0.999. And the overall total of 0.990 has asmp. Sig (2-tailed) is greater than alpha 0.05. Thus, it can be stated that the data from each variable is normally distributed.

Multiple Regression Analysis
Based on the results of data processing in table 7 above, the equation model \( Y = 78.996 + 1.762 X1 + 0.790 X2 \) is obtained, meaning that there is a positive influence between work discipline and work ethic on the performance of Sultan Agung Pematangsiantar Private Middle School. Following is an explanation of the multiple regression equation above:
- \( 78.996 \), meaning that if the work discipline and the work ethic are zero, the teacher's performance is worth 78.996.
- \( 1.762 \), meaning that if work discipline increases by one unit assuming other variables are constant, then teacher performance will increase by 1,762.
- \( 0.790 \), meaning that if the work ethic rises by one unit assuming other variables are constant, then the teacher's performance will increase by 0.790.

Correlation Analysis and Determination Coefficient
Based on the results of the correlation in the table above, obtained a correlation of \( r \) value of 0.714, meaning that there is a strong relationship between the variables of work discipline and work ethic on teacher performance. Then the coefficient of determination is obtained that is 0.474, meaning that good or bad teacher performance is explained by 47.4% by work discipline and rest of the work ethic is 52.6% explained by other factors such as leadership, school principal supervision, teacher competence, communication and teacher professionalism that is not discussed in this study.

Simultaneous Test (F Test)
From table 9 above the \( F_{\text{count}} \) is 14.520 > \( F_{\text{table}} \) at the 0.05 level, \( (2 \text{ vs } 31 - 2 - 1 = 28) \) is 3.34. Because \( F_{\text{count}} > F_{\text{table}} \) or significance level 0.000 < from alpha 0.05, then \( H_0 \) is rejected, meaning that work discipline and work ethic have a significant effect on the performance of Sultan Agung Pematangsiantar Private Middle School.

a. Dependent Variable: Teacher Performance
Source: results of data processing (2019)

From the above table on the work discipline variables obtained tcount of 2.498> table with the provisions of n-k-1 at an error level of 5% or 0.05 (31-2-1 = 28) of 2,048 or a significant level of 0.019 < of alpha 0.05 then H0 is rejected, meaning that work discipline has a significant effect on the performance of Sultan Agung Pematangsiantar Private Middle School. Work ethic obtained tcount 2.349> table with the provisions of n-k-1 at the error level of 5% or 0.05 (31-2-1 = 28) of 2,048 or 0.026 significant level < of alpha 0.05 then H0 is rejected, meaning work ethic has a significant effect on the performance of Sultan Agung Pematangsiantar Middle School teachers.

CONCLUSIONS AND RECOMMENDATION

Conclusion
1. There is a positive influence between work discipline and work ethic on teacher performance at Sultan Agung Pematangsiantar Private Middle School.
2. There is a strong relationship between work discipline and work ethic on teacher performance at Sultan Agung Pematangsiantar Private Middle School. Whether or not the performance of teachers in Sultan Agung Pematangsiantar Private Middle School is explained by work discipline and work ethics while the rest is influenced by other factors such as leadership, supervision of the principal, teacher competence, communication and teacher professionalism that are not discussed in this study.
3. The results of simultaneous hypothesis testing with the F test, obtained by H0 were rejected, meaning that there was a significant influence between the variables of work discipline and work ethic on the performance of Sultan Agung Pematangsiantar Private Middle School.
4. Partial hypothesis testing results with t test, obtained by H0 rejected, meaning that there is a significant influence between work discipline and work ethic on the work of Sultan Agung Pematangsiantar Private Middle School partially.

Recommendation
1. To improve work discipline at Sultan Agung Pematangsiantar Private Middle School, there needs to be a transparent system in recruiting permanent teachers who only teach at Sultan Agung Pematangsiantar Private Middle School so that the teacher focuses on their work. In addition, there is a need for assertiveness from the school principal in overseeing the discipline of teachers regarding their performance.
2. To improve the work ethic of Sultan Agung Pematangsiantar Private Middle School teachers, it is better for the principal as the leader to provide personal and organizational motivation so that every teacher who works can maintain a balanced work ethic competently.
3. To improve the performance of teachers at Sultan Agung Pematangsiantar Private Middle School, it is expected that Sultan Agung Pematangsiantar Private Middle School will further explore and inspire every character, talent and self-potential so that self-actualization to work professionally can be improved.

RESEARCH LIMITATIONS

In connection with the limitations that exist in the author, this study is still far from perfection and there are still weaknesses and have not been able to reveal all the variables that affect the performance of teachers in Sultan Agung Pematangsiantar Private Middle School and as input for further research need to multiply variables such as leadership, supervision of school principals, teacher competence, communication and teacher professionalism are not discussed in this study.
